

M19-550 Randomized Controlled Trials

Fall 2015

- Time** Monday 1 to 4 PM
- Location** Doll & Hill Teaching Room, 2nd Floor, Taylor Ave Building,
600 S Taylor Ave.
Division of Public Health Sciences.
- Instructors** Graham Colditz, MD, DrPH, Esther Liu, PhD, Anke Winter, MD, SM,
and guest speakers
Carrie Stoll MPH, MSW, Teaching Assistant
- Office hours** By appointment and after class
colditzg@wustl.edu
esther@wubios.wustl.edu
wintera@wudosis.wustl.edu
stollc@wudosis.wustl.edu
- Target audience** Clinicians interested in conducting research, clinical training program participants, students enrolled in Master of Science in Biostatistics program. Prior clinical or community research experience is helpful but not required.
- Prerequisite** Introductory epidemiology and biostatistics 1 simultaneously to this course (or permission of the course master)
- Credits** 3

Course overview

Description: This course provides a comprehensive introduction to randomized controlled clinical trials. Topics include types of clinical trials research (efficacy and effectiveness trials), study design, treatment allocation, randomization and stratification, quality control, analysis, sample size requirements, patient consent, data safety and monitoring plans, reporting standards, and interpretation of results. The role of randomized trials in comparative effectiveness research and also the evaluation of prevention strategies is also addressed. Application of results of trials to inform practice is emphasized throughout.

Evaluation: Students design a clinical investigation protocol in their own field of interest, write a proposal for it, and critique recently published medical literature.

Competencies:

1. Ability to design randomized controlled trial
 - Define research question
 - Understand efficacy and effectiveness trials, their differences and implications for clinical practice
 - Define study population and estimate sample size
 - Define approaches for recruitment strategy, randomization, and blinding
 - Apply eligibility criteria and recording of recruitment adequate for trial reports
 - Develop data collection plan for primary endpoint, secondary endpoint, covariates and adverse events and implement data quality monitoring
 - Apply strategies for monitoring trial adherence
2. Skills and experience to conduct analysis of RCT
 - Master data analysis and model fitting in context of RCT
 - Conduct survival analysis
 - Apply principles of interim analysis and stopping rules
 - Apply principles for subgroup analysis
 - Apply principles for per protocol analysis
 - Understand design and implementation issues in conduct of multicenter trials
3. Master the core reporting strategies
 - Master reporting standards for RCTs following Consort and Extended Consort approaches
 - Master development of reports for data safety monitoring board
 - Understand issues pertaining to FDA standards for reporting
4. Draw inferences from data to inform clinical and public health practices
 - Correctly use reasoning for design and methodologies employed
 - Interpret Adverse Events in context of biology and study design
 - Interpret subgroup analyses in context of biology, disease process and public health practices
 - Present oral and written reports from analyses
 - Place inference in context of clinical and public health implications for action and future research

Readings

Text (Fundamentals of Clinical Trials: Friedman, Furberg, and DeMets. 4th edition) plus the listing that follows accessible through the library listing.

Assignment due dates

Details of all assignments can be found in the Assignments folder on blackboard

- **HW 1: Schema**
Presented in class on September 21.
Slides are due to stollic@wudosis.wustl.edu by September 20 at midnight
- **HW 2: Primary outcome and sample size calculation**
Due Oct 5 by midnight to stollic@wudosis.wustl.edu
- **HW 3: Data collection and analysis plan**
Due Oct 26 by midnight to stollic@wudosis.wustl.edu
- **Final Presentation**
In class on Nov 16 and Nov 23. Students will sign up for a date in early October.
Presentation slides are due the night before at midnight to stollic@wudosis.wustl.edu
- **Final Protocol**
Due Dec 7 by midnight to stollic@wudosis.wustl.edu

Grade

Your grade will be based on:

- Class participation (10%)
- HW 1: Schema (10%)
- HW 2: Primary outcome and sample size calculation (10%)
- HW 3: Data collection and analysis plan (10%)
- Final protocol presentation (10%) and paper (50%)

Grading Scale

A+: 97-100; A: 93-96; A-: 90-92; B+: 87-89; B: 83-86; B-: 80-82; C+: 77-79; C: 73-76; C-: 70-72

Attendance and Participation

Class attendance is required. As a courtesy to other students, you are expected to arrive on time. More than two unexcused absences from class may result in a lowered grade. Readings assigned for each class should be read ahead of the class and students should be prepared to discuss the material from readings.

Policy on Late Assignments

Late assignments will result in a deduction of one grade point (A+ down to A) for each day late (including weekends) unless prior approval is obtained from the instructor or a compelling situation prevents prior approval (i.e. documented health issues or family emergencies).

**Randomized Controlled Trials
2015**

Week	Date	Topic
Class 1	Aug 24	Overview – the role of RCTs in evaluating medical and public health interventions Goals for the course Homework assignments <i>Guest Speaker: Jennifer Yu, MD, MPHS</i>
Class 2	Aug 31	Phase III trials; Efficacy vs. Effectiveness (Population definitions) Trials in context of CER Discuss HW assignments and final project expectations
Class 3	Sept 14	Bias and Error Randomization <i>Guest Speaker: Pam Samson, MD, MPHS</i>
Class 4	Sept. 21	Homework 1: Schema Presentations
Class 5	Sept 28	Sample size & stopping rules <i>Guest Speaker: Michael Avidan, MBBCh, Professor of Anesthesiology</i>
Class 6	Oct 5	Defining and enrolling patients Ethical considerations, health literacy and participant recruitment issues. DUE: Homework 2 Primary outcome and sample size calculation
Class 7	Oct 12	Adherence to intervention RCTs for Prevention
Class 8	Oct 19	Data quality Intermediate endpoints/biomarker endpoints Issues in data collection and management – REDCap - J Tappenden

Class 9	Oct 26	Follow-up, data monitoring, interim analysis, & SAEs <i>Guest Speaker: William Powderly, MD, Director, Institute for Public Health, Co-Director of the Division of Infectious Diseases</i> Due: Homework 3 data collection and analysis plan
Class 10	Nov 2	Analysis – main hypothesis, secondary and subgroup analysis
Class 11	Nov 9	Per protocol analysis Budgets, timelines, and feasibility
Class 12	Nov 16	Final presentations
Class 13	Nov 23	Final presentations
Class 14	Nov 30	Reporting CONSORT & EXTENDED consort Applying results of RCTs to clinical practice
Class 15	Dec 7	Data safety and monitoring <i>Guest Speaker TBA</i> Due: Final protocol

Topics and Readings

Week	Date	Topic
Class 1	Aug. 24	<p>Overview – the role of RCTs in evaluating medical and public health intervention</p> <ul style="list-style-type: none"> • <i>Chapter 1. (Introduction to Clinical Trials) and Chapter 5 (Basic study design)</i> • Doll R. Controlled trials: the 1948 watershed BMJ 1998; 317: 1217-20 • Sydes MR.
